

SYSTEM REQUIREMENTS

The system requirements for Life Finances are very simple. You only need a connection to the Internet! Thespis/4t Nox hosts its courses reducing client/customer IT resources while providing anywhere, anytime, on-demand access.

Most computers come with Adobe Flash Player installed. If your computer doesn't, [click here to download it for free](#).

If your system can run Adobe Flash Player you shouldn't have any problems taking our courses (Adobe Flash Player system requirements [click here](#)).

It is helpful if students have the ability to save information to a hard drive or jump drive. It is also helpful, though not necessary, to have access to a printer.

Students should be able to open spreadsheet and document files by using programs such as Microsoft's Word and Excel, or free programs from Open Office, Libre Office, etc., as well as PDF documents via a PDF Reader.

Thespis/4t Nox courses run in all major browsers. For optimum performance all cache, history, and cookies should be cleaned out routinely. Additionally, as we update the courseware on our servers frequently, it is necessary to clean your browsers so the new updates take effect on the local device. While cleaning the browser and rebooting your computer fixes most minor problems (slow buffering, freeze frames, etc.), ISP problems, slow/interrupted internet connections, or customer network issues are realities and must be handled at the source. And of course in software there are glitches that can arise unexpectedly and which we fix as soon as possible once detected.

The Troubleshooting document is a helpful resource; it is always available for download.

If your local area network requires white listing all new outside sites, please contact us and we will work with your IT administrator to provide the necessary information.
